(54) METHOD FOR UTILIZING HSP70 FAMILY PROTEIN SUBSTRATE-BOUND DOMAIN FRAGMENT

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a method for efficiently carrying out refolding of a modified protein, a method for stabilizing the protein and an efficient blocking method, and to obtain a reagent composition for these methods.

SOLUTION: The present invention provides the method for carrying out refolding, the method for folding or stabilization of the protein and the method for blocking a solid phase each in the presence of HSP70 family protein from which ATPase domain is removed.
